

MANTSINEN INSIGHT™ DATA INTERFACE

Mantsinen Insight™ Data Interface is an option available with Mantsinen Insight™ that enables data integration from Mantsinen Insight™ Cloud to client's own systems. With Data Interface, valuable data obtained from material handling machines can be integrated directly into the client's existing software. This makes data retrieving and reporting easier, which allows data-based decision-making leading to more efficient operations management. Thanks to Data Interface, reporting costs are reduced, data quality is improved and resource planning becomes more agile.

MANTSINEN INSIGHT™ DATA INTERFACE

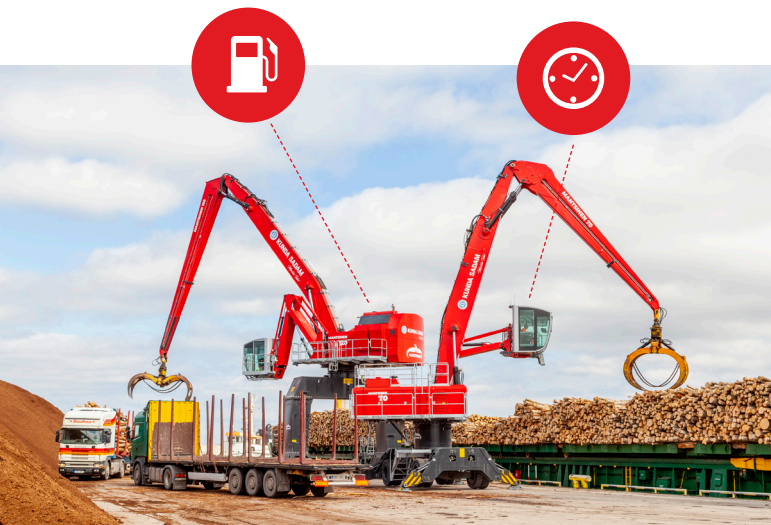

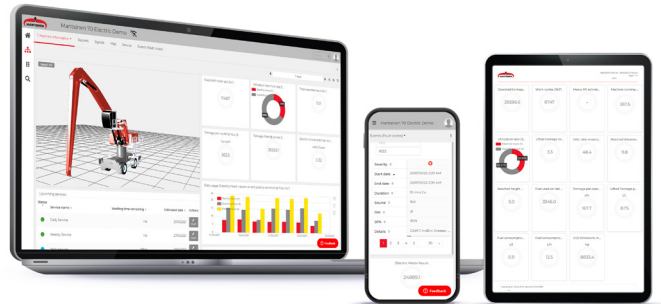

- Allows automatic reports directly to your IT-systems.
- Information enables learning, lower costs, easier reporting and more efficient data analysis.
- Commonly followed data points are machine hours, consumption, fuel tank level and work cycle data.
- Insight™ Cloud keeps all your data safe and secured.

Mantsinen Insight™ Data Interface option requires Mantsinen Insight™ Standard subscription.

ENHANCE YOUR WHOLE BUSINESS WITH DATA

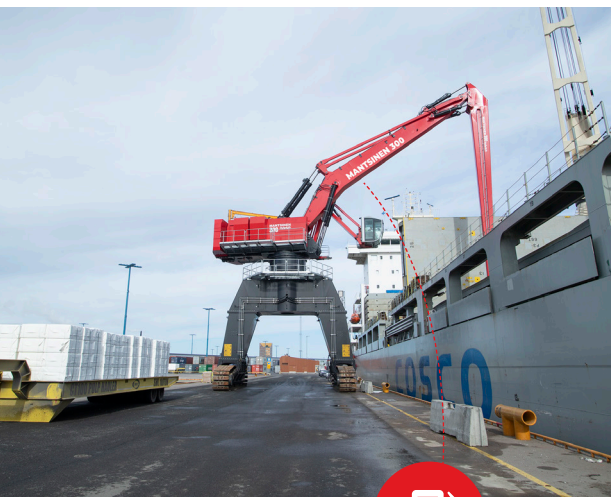

IMPROVED DATA QUALITY AND REPORTING

Mantsinen Insight™ Data Interface enables automatic gathering and transfer of real-time raw data offering value to many company functions. Cutting of manual work eliminates human error and increases data quality. Streamlining the process results in improved reporting quality throughout the company and also reduces required time and costs.

BENEFITS THROUGHOUT THE COMPANY

Faster and simpler data gathering eases the workload of many units in the company. Often simply the information, such as machine operating hours or consumption, provides pivotal value for different people and departments. For example, keeping track of the operating hours is vital for both the operations manager and the maintenance department, and the consumption information benefits the work of the company's fuel logistics manager. The data can also be widely utilized in sustainability reports and annual reports.

INSIGHT DATA INTERFACE ONSITE UPGRADE THE SERVICE, ENHANCE THE BUSINESS

In the most modern service environments optimizing is everything for sustainability. Some fuel suppliers deliver fuel on a site as a service to which knowing the amount of fuel needed to be delivered is a big thing.

One of the companies using Mantsinen Insight Data Interface is Neste, the world's leading producer of renewable diesel and sustainable aviation fuel. They aim at helping customers to reduce greenhouse gas emissions with renewable and circular solutions and sustainable services.

Neste uses Mantsinen Insight Data Interface to track their clients' fuel levels. With gathered data, Neste can utilize timely fuel deliveries on site. This cuts all the unnecessary back and forth driving, reduces the machine downtime as well as lowering emissions on the customer and supplier side. Enabling lower emission operation for the clients is at the heart of Neste.

If a delivery truck brings too much fuel it increases emissions and the excess amount needs to be returned or delivered to unplanned places. With Mantsinen Insight and Data Interface, fuel suppliers know exactly how many litres need to be delivered. This eliminates unnecessary returns, reduces emissions and costs — and makes the operations more sustainable.
